

AR-MULTI

Automatic multiform labelling machine.

Automatic multiform labelling machine suitable for applying self-adhesive labels on cylindrical, oval packs and flat faces, in addition to some conical cases. Equipped with two heads AR2-130/50 and separator packages by double band motorized stepper motors.

The packaging centering oval section with electronically synchronized approach allows us to ensure accuracies of ± 1 mm.

The sideband stepper motor smoothing labels on cylindrical containers while containers oval section and flat faces are smoothed by brushes. All engines are electronically synchronized with the main transporter, which ensures excellent quality labelling at any speed.

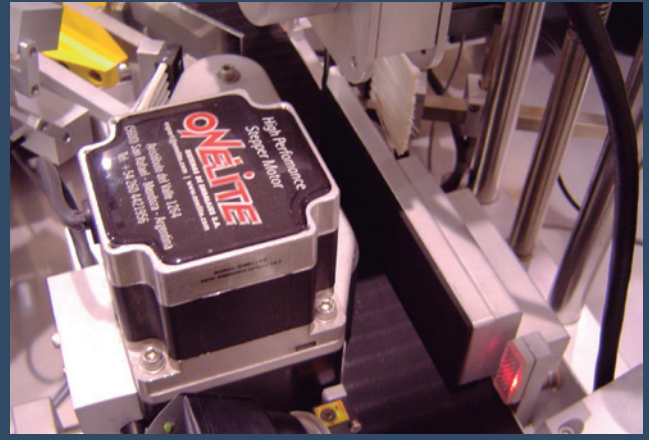

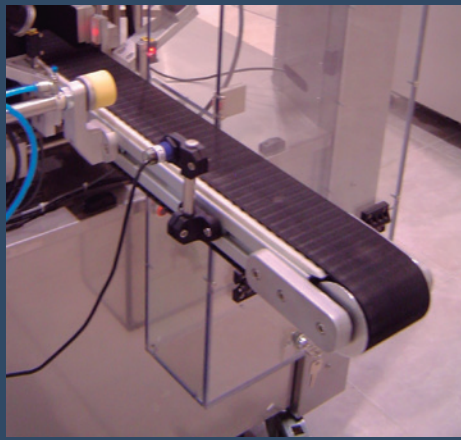

Traceability

The machine offered the possibility (from the same PLC panel) and space to add printers and data capture of traceability information for integration with e-Pedigree and serialization systems. Optionally incorporate a labelling inspector through intelligent vision sensors.

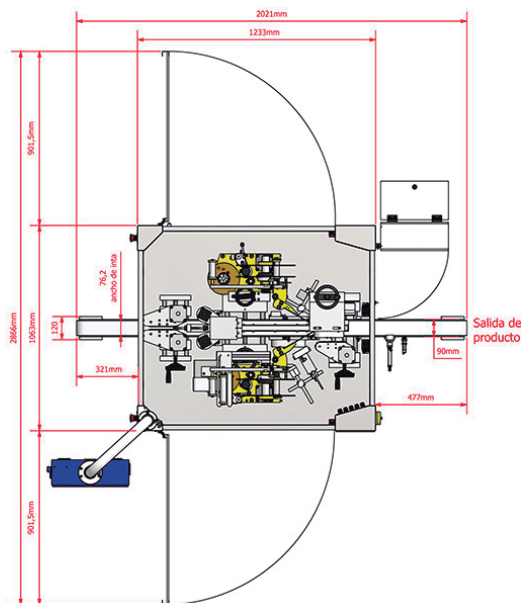

Technical Data

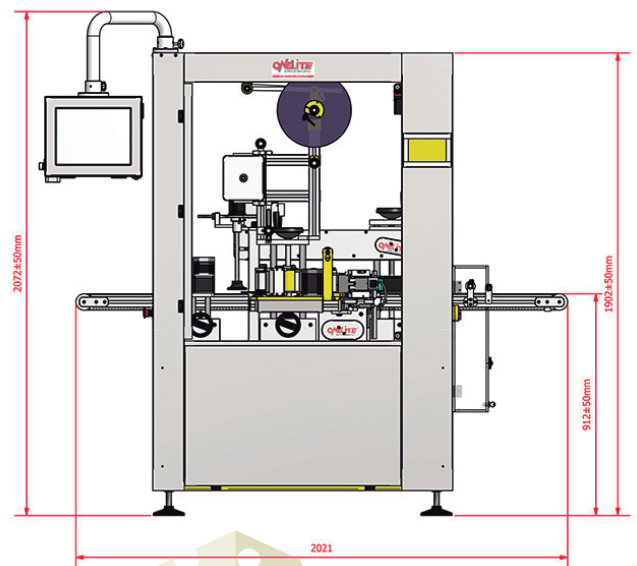

The electronic controller incorporates a touch panel LCD COLOR 7" with USB and Ethernet connectivity in compliance with CFR 21 Part 11.

TOP LAYOUT

SIDE LAYOUT

Aware of the need to maximize space in the clean rooms in the pharmaceutical industry, the size of our machines is one of the main premises at the time of the design of our entire Pharma Line.
